Dear Mr. Walsh:

**Re: Second Quarter Surface Monitoring at High Acres Landfill
NYSDEC Permit ID No.: 8-9908-00162/00043**

On the dates of June 9, 2020 and June 10, 2020, GHD conducted the Second Quarter Surface Scan Program for the Waste Management of New York, LLC (WMNY) - High Acres Landfill and Recycling Center (High Acres) Facility located in Perinton, New York. The monitoring was conducted in accordance with the Revised Surface Emission Monitoring and Ambient Monitoring Work Plan (Work Plan), which was submitted to New York State Department of Environmental Conservation (NYSDEC) on April 30, 2019 and approved on July 9, 2019. As per Section 1.2 of the Work Plan, GHD used 200 parts per million (ppm) of methane as an enhanced monitoring level instead of the 500 ppm level noted in 40 CFR 60.763(d).

1. Quarterly Landfill Surface Monitoring

GHD performed the calibration, evaluation, and monitoring using a Thermo Environmental Instruments Toxic Vapor Analyzer (TVA) 1000 flame ionization detector (FID) to determine surface methane levels. Attachment 1 contains the monitoring instrument performance evaluation and calibration documentation. The monitoring followed a serpentine pattern at 30-meter intervals, as required in 40 CFR Part 60 Subpart 60.763, and followed the pattern described in the Work Plan for the Facility. Areas where visual observations indicated elevated concentrations of landfill gas, such as distressed vegetation and cracks or seeps in the cover, were monitored. While following the serpentine route, GHD monitored any penetrations they encountered along the serpentine path. Furthermore, the technician avoided dangerous areas as depicted on Figure 1.

All readings of 200 ppm or more above background but less than 500 ppm above background were recorded as a monitored exceedance, and the actions specified in paragraphs (i) through (v) below have been taken thus far.

- i) The location of each monitored exceedance shall be marked and the location recorded.
- ii) Cover maintenance or adjustments to the vacuum of the adjacent wells to increase the gas collection in the vicinity of each exceedance shall be made and the location shall be re-monitored within 30 calendar days of detecting the exceedance. If the 30-day re-monitoring of the location exhibits a reading of 200 ppm above background or less, no further action is required for the location for the quarter.

- iii) If the 30-day re-monitoring of the location shows a second exceedance, additional corrective action shall be taken, and the location shall be monitored again within 10 days of the second exceedance. If the additional 10-day re-monitoring of the location exhibits a reading of 200 ppm above background or less, no further action is required for the location for the quarter. If the additional 10-day re-monitoring shows a third exceedance for the same location, the action specified in paragraph (4)(iv) below shall be taken, and no further monitoring of that location is required until the action specified in paragraph (4)(iv) has been taken.
- iv) For any location where monitored methane concentration equals or exceeds 200 ppm above background three times within a quarterly period, a new well or other collection device shall be installed within 120 calendar days of the initial exceedance. An alternative remedy to the exceedance, such as upgrading the blower, header pipes or control device, and a corresponding timeline for installation may be submitted to the Administrator for approval.
- v) Five hundred ppm of methane above background will remain the applicable threshold for Title V and New Source Performance Standards (NSPS) reporting purposes. The procedures for handling an exceedance of 500 ppm above background or greater limit will continue to follow the requirements outlined in the Title V Permit and the NSPS rule for municipal solid waste (MSW) landfills under 40 CFR 60, Subpart XXX.

The following areas exhibited FID readings greater than 200 ppm above background during the second quarter of 2020:

Date	Grid	Location	Description	Reading (ppm)

Table 1 outlines the location of exceedances and the respective corrective actions taken. Pictures of the exceedance locations can be referenced in Attachment 2.

A reading was taken at each grid location as shown in Table 2. There were no other exceedances of the 200-ppm above background limit observed at any of the grid points or ground penetrations on High Acres during this quarterly period.

The 1-month follow-up readings took place on July 8, 2020. All exceedance points displayed readings below the 200-ppm above background limit and are currently in compliance.

2. Quarterly Ambient Air Monitoring Hydrogen Sulfide (H₂S)

On April 30, 2019, GHD submitted a Work Plan to the NYSDEC for WMNY, High Acres located in Perinton, New York (Facility or Site). The Work Plan was approved by NYSDEC on July 9, 2019. This submittal serves to provide NYSDEC with a discussion of work and monitoring activities that occurred during the second quarter of 2020.

Initial Equipment Installation

On June 5, 2020, GHD commenced work activities at the Site. There were four Acrulog H₂S monitoring units installed at the following locations:

Station Name	Unit Serial Number	Date of Last Service
West Monitoring Station (WMS)	171000375	June 1, 2020
North Monitoring Station (NMS)	180200447	January 9, 2020
East Monitoring Station (EMS)	160600051	June 1, 2020
South Monitoring Station (SMS)	170600221	June 1, 2020

Figure 2 presents a map showing the location of each monitoring station. For the WMS, NMS, EMS, and SMS, each Acrulog unit, which consists of the monitoring equipment enclosed within a weather shelter, was padlocked to a mounting bracket. Each mounting bracket was installed into the side of a tree using lag bolts. In order to assess whether tampering of the unit has occurred, a camera (Wildgame Innovations Cloak Pro Lights Out Trail Camera) was mounted on a tree approximately 20 to 25 feet away from the Acrulog unit. The camera units are motion activated and will snap a 12-megapixel picture upon detection of motion (at 15-second intervals). The cameras have "night-vision" lenses, which allow pictures to be taken during nighttime hours.

Acrulog Data Download

Each of the four Acrulog units was placed into logging mode (began taking samples) on the morning of June 9, 2020, prior to commencement of the second quarter surface emission monitoring event. On the afternoon of June 17, 2020, Mr. Benson Chen (GHD) visited the WMS, EMS, and SMS to place them off logging mode. On the afternoon of June 19, 2020, Mr. Bryan Szalda (GHD) visited each of the four monitoring stations and removed the Acrulog units. An initial inspection of the monitoring stations and the surrounding area was performed. Next, each Acrulog unit was linked to a laptop via Bluetooth connection, and the monitoring data was downloaded into a separate folder for each station. After downloading the monitoring data, the connection was terminated, and the Acrulog unit was checked to ensure that the equipment was continuing to log samples every 10 minutes.

Next, the pictures from the camera unit, which are stored on an SD card, were downloaded onto a laptop, and the SD card was placed back into the camera.

Summary of Collected Monitoring Data

A preliminary review of the data provides the following:

- Between June 9, 2020 and June 17, 2020, a total of 4,811 measurements of H₂S was taken.
- Of the total of 4,811 readings taken, 4,698 were below detection.
- There were fourteen detections ranging 3 to 9 parts per billion (ppb) at the WMS.
- There were twelve detections ranging 3 to 5 ppb at the NMS.
- There were eighty-two detections ranging 3 to 13 ppb at the EMS. 81 of the 82 detections occurred over 2 consecutive evenings/nights (one sustained period of 25 detections occurred during the evening of June 9, 2020 and a second sustained period of 56 detections occurred on the evening of June 10, 2020 through the early morning of June 11, 2020). Due to the frequency of detections at the EMS over these 2 evenings/nights, GHD evaluated potential sources of H₂S emissions at and around the landfill that could have caused or contributed to the readings identified. While no specific sources were identified, no landfill related sources are believed to have caused or contributed to the detections noted. The following facts support this conclusion:
 1. The frequency of detections are significantly higher than any other monitoring period before this monitoring period (as of the date of this report), with the exception of another similar event that occurred in August 2018.
 2. Elevated readings were identified when the landfill was upwind of the monitoring station, but also when the landfill was cross-wind.
 3. All 82 of the detections occurred at evening/ night when the landfill was not operating.
 4. A review of odor complaints during the month of June 2020 confirms that there were zero complaints made during the evening of June 9, 2020, the evening of June 10, 2020 and the early morning hours of June 11, 2020 during the time period when the detections occurred at the EMS.
 5. During a 1-hour period on the morning of June 11, 2020 (between 12:50 a.m. and 1:40 a.m.), all four perimeter stations registered detections (WMS 4 detections, NMS – 2 detections, EMS – 6 detections, SMS – 1 detection) while the winds were primarily from the southerly direction.
 6. No significant construction or other activities were occurring during this time period that were not also occurring during other time periods.
 7. A review of flare and engine plant operational data indicates that the devices were operating within typical flow ranges (i.e. no reduction in the volume of landfill gas collected and destroyed).
 8. No unusual waste streams were reported to have been received during this time frame.
 9. No other equipment shutdowns or malfunctions were identified

- There were five detections ranging 4 to 9 ppb at the SMS.
- It should be noted that the detections of H₂S do not confirm the landfill as the source. Other sources in the vicinity commonly produce H₂S including wetlands, sanitary sewers and other potential sources
- NYSDEC's ambient standard for H₂S is 10 ppb for a 1-hour average (6NYCRR Subpart 257-10).

The on-Site meteorological data at the Site for the weeks of June 9, 2020 through June 17, 2020 are provided in Attachment 3.

Ambient average concentrations of H₂S typically range from 0.11 to 0.33 ppb (Agency for Toxic Substances and Disease Registry (ATSDR) Toxicological Profile for Hydrogen Sulfide and Carbonyl Sulfide).

The raw data for each monitoring station during the period of June 9, 2020 through June 17, 2020 are provided as Attachment 4 to this report.

Summary of Landfill Activities

Operational activities occurring during the week of monitoring included the following:

- Leachate extraction
- Operations and maintenance
- Transportation, filling, compaction, and cover of typical volumes of waste received by rail and truck
- Typical volumes of landfill gas extraction and combustion in flare and engine plants
- Composting
- Initial excavation in Cell 13a area
- Second quarter surface emissions monitoring event
