Reference No. 089290

Mr. Paul D'Amato
Regional Director
New York State Department of Environmental Conservation
Region 8-Division of Air Resources
6274 Avon-Lima Road
Avon, NY 14414

Dear Mr. D'Amato:

**Re: Surface Emission Monitoring and Ambient Monitoring Work Plan
Weekly Report #19/20 (July 11, 2018 through July 24, 2018)
High Acres Landfill**

On March 2, 2018, GHD submitted a Revised Surface Emission Monitoring and Ambient Monitoring Work Plan (Work Plan) to the New York State Department of Environmental Conservation (NYSDEC) for the Waste Management of New York LLC (WMNY), High Acres Landfill and Recycling Center located in Perinton, New York (Facility or Site). This submittal serves to provide NYSDEC with a discussion of work and monitoring activities that occurred during the biweekly period of July 11, 2018 through July 24, 2018.

Initial Equipment Installation

On March 6, 2018, GHD commenced work activities at the Site. There were five AcruLog hydrogen sulfide (H₂S) monitoring units installed at the following locations:

| Station Name | Unit Serial Number | Initial Calibration Date ¹ | Initial Operation Date |
|------------------------------------|--------------------|---------------------------------------|------------------------|
| West Monitoring Station (WMS) | 180200450 | March 1, 2018 | March 6, 2018 |
| North Monitoring Station (NMS) | 180200447 | March 1, 2018 | March 6, 2018 |
| East Monitoring Station (EMS) | 180200452 | March 1, 2018 | March 6, 2018 |
| South Monitoring Station (SMS) | 180200449 | March 1, 2018 | March 6, 2018 |
| School Monitoring Station (School) | 171000376 | March 1, 2018 | March 6, 2018 |

Figures 1 and 3 present maps showing the location of each monitoring station.

For the WMS, NMS, EMS and SMS, each AcruLog unit, which consists of the monitoring equipment enclosed within a weather shelter, was padlocked to a mounting bracket. Each mounting bracket was

¹ According to manufacturer, a calibration of the instrument should occur every six months. The next calibration is due by September 1, 2018.

installed into the side of a tree using lag bolts. In order to assess whether tampering of the unit has occurred, a camera (Wildgame Innovations Cloak Pro Lights Out Trail Camera) was mounted on a tree approximately 20 to 25 feet away from the Acrulog unit. The camera units are motion activated and will snap a 12 megapixel picture upon detection of motion (at 15 second intervals). The cameras have "night-vision" lenses which allow for pictures to be taken during night-time hours.

For the School Monitoring Station, the Acrulog unit was hung from an apparatus placed on top of the roof. The camera was placed approximately 20 feet away on an exhaust pipe penetrating through the roof.

Each of the Acrulog units was linked to a laptop via Bluetooth connection to ensure that the units were taking samples and logging readings every 10 minutes prior to departing each location. The camera units were also checked to ensure that pictures were being taken.

Weekly Acrulog Data Download

On the morning of July 25, 2018, Mr. Michael Casullo (GHD) visited each of the five monitoring stations. An initial inspection of the monitoring stations and the surrounding area was performed. Next, each Acrulog unit was linked to a laptop via Bluetooth connection and the monitoring data was downloaded into a separate folder for each station. After downloading the monitoring data, the connection was terminated and the Acrulog unit was checked to ensure that the equipment was continuing to log samples every ten minutes.

Next, the pictures from the camera unit which are stored on an SD card, were downloaded onto a laptop and the SD card was placed back into the camera.

In addition, the Acrulog unit for the School (Serial Number 171000376) was placed back into service on July 25, 2018 at 14:50 after being sent out for calibration and service. The Acrulog unit for the East Monitoring Station (Serial Number 180200452) was removed on July 25, 2018 at 16:33 in order to be sent out for calibration and service. The temporary Acrulog unit (Serial Number 180400520 with an initial service date of June 6, 2018) was moved from the School to the East Monitoring Station beginning on July 25, 2018 at 16:33 as a temporary replacement.

Summary of Collected Monitoring Data

A preliminary review of the data provides the following:

- Between July 11, 2018 and midnight on July 24, 2018, a total of 10,044 measurements of H₂S were taken.
- Of the total of 10,044 readings taken 10,025 were below detection.
- Between July 11, 2018 and midnight on July 24, 2018, the following individual 10-minute readings were observed:
 - Fourteen (14) 10-minute readings ranging from 3 ppb to 10 ppb were identified at NMS
 - Five (5) 10-minute readings ranging from 3 ppb to 15 ppb were identified at the School Monitoring Station
- No detections were identified at WMS, EMS or SMS.

- NYSDEC's ambient standard for H₂S is 10 ppb for a 1-hour average (6 NYCRR Subpart 257-10). One-hour averages of H₂S for all sampling periods to date are below the NYSDEC standard of 10 ppb.

While nineteen (19) readings of H₂S were detected (0.19 percent of all readings), they were below applicable thresholds. In addition, it should be noted that the detections of H₂S do not confirm the landfill as the source. Other sources in the vicinity commonly produce H₂S including wetlands, sanitary sewers and other potential sources.

The on-site meteorological data at the Site for the week of July 11, 2018 through July 24, 2018 is provided in Attachment 1A. Upon downloading the on-site meteorological data, site personnel discovered a data gap for the period of July 11, 2018 through July 19, 2018. The reason for this data gap is not known. Meteorological data for this period was supplemented using meteorological data from the Rochester International Airport weather station and has been provided in Attachment 1B. Data gaps such as these are not uncommon with long term monitoring programs and the use of supplemental data is routine. Should future data gaps occur this same supplemental data source will be used.

Ambient average concentrations of H₂S typically range from 0.11 to 0.33 ppb (Agency for Toxic Substances and Disease Registry (ATSDR) Toxicological Profile for Hydrogen Sulfide and Carbonyl Sulfide).

Figures 2 and 4 show the monitoring data compared to the NYSDEC ambient standard. The raw data for each monitoring station during the period of July 11, 2018 through July 24, 2018 is provided as Attachment 2 to this report.

Summary of Landfill Activities

Operational activities occurring during the week of monitoring included the following:

- Leachate extraction
- Operations and maintenance
- Transportation, filling, compaction and cover of typical volumes of waste received by rail and truck
- Typical volumes of landfill gas extraction and combustion in flare and engine plants
- Composting
- Construction of Cell 12b
- Soil grading on the top of Cell 10 and Cell 11

Further details on the monitoring methods and evaluation of results will be provided in our final report.

We appreciate your assistance in this process. We plan to issue biweekly reports (every 2 weeks) going forward until the completion of work activities. Please feel free to contact us if you have any questions, if you would like any clarifications, or additional information.

Sincerely,

GHD
